Product Summary

With ProHVM you can manage Hyper-V Servers and virtual machines both locally and remotely. ProHVM enables you to manage multiple versions of Hyper-V in one application, and from almost any version of windows. Use it on Servers, desktops and Core installations both 32 and 64-Bit. Using ProHVM you can connect to and manage Hyper-V servers in other domains and workgroups using different credentials.

It is very useful on installations of free Microsoft Hyper-V Server where you cannot run Microsoft Hyper-V manager locally.

Product Description

Effortlessly manage Hyper-V Servers and virtual machines, whether they're installed locally or on a remote host, with ProHVM. This tool allows you to handle various Hyper-V versions within a single application, compatible with different Windows versions, including Servers, desktops, and Core installations (32/64-bit). ProHVM also facilitates secure connections to Hyper-V servers across domains and workgroups, utilizing distinct credentials.

It's especially useful for efficiently managing free Microsoft Hyper-V Server installations, where local access to Microsoft Hyper-V Manager might not be feasible.

Professional License:

The Professional license covers management of a single Hyper-V host. Should you need to manage two hosts, the acquisition of two licenses is necessary. For those with the intention to manage multiple hosts efficiently, the "Technician License" is a viable option. That license grants the capability to manage any number of Hyper-V Hosts, mirroring the extensive features offered by ProHVM Professional.
